# Unemployed statistics

Unemployed statistics is a project based on the unemployment data established on the factors of gender, age, period and the number of unemployed people.

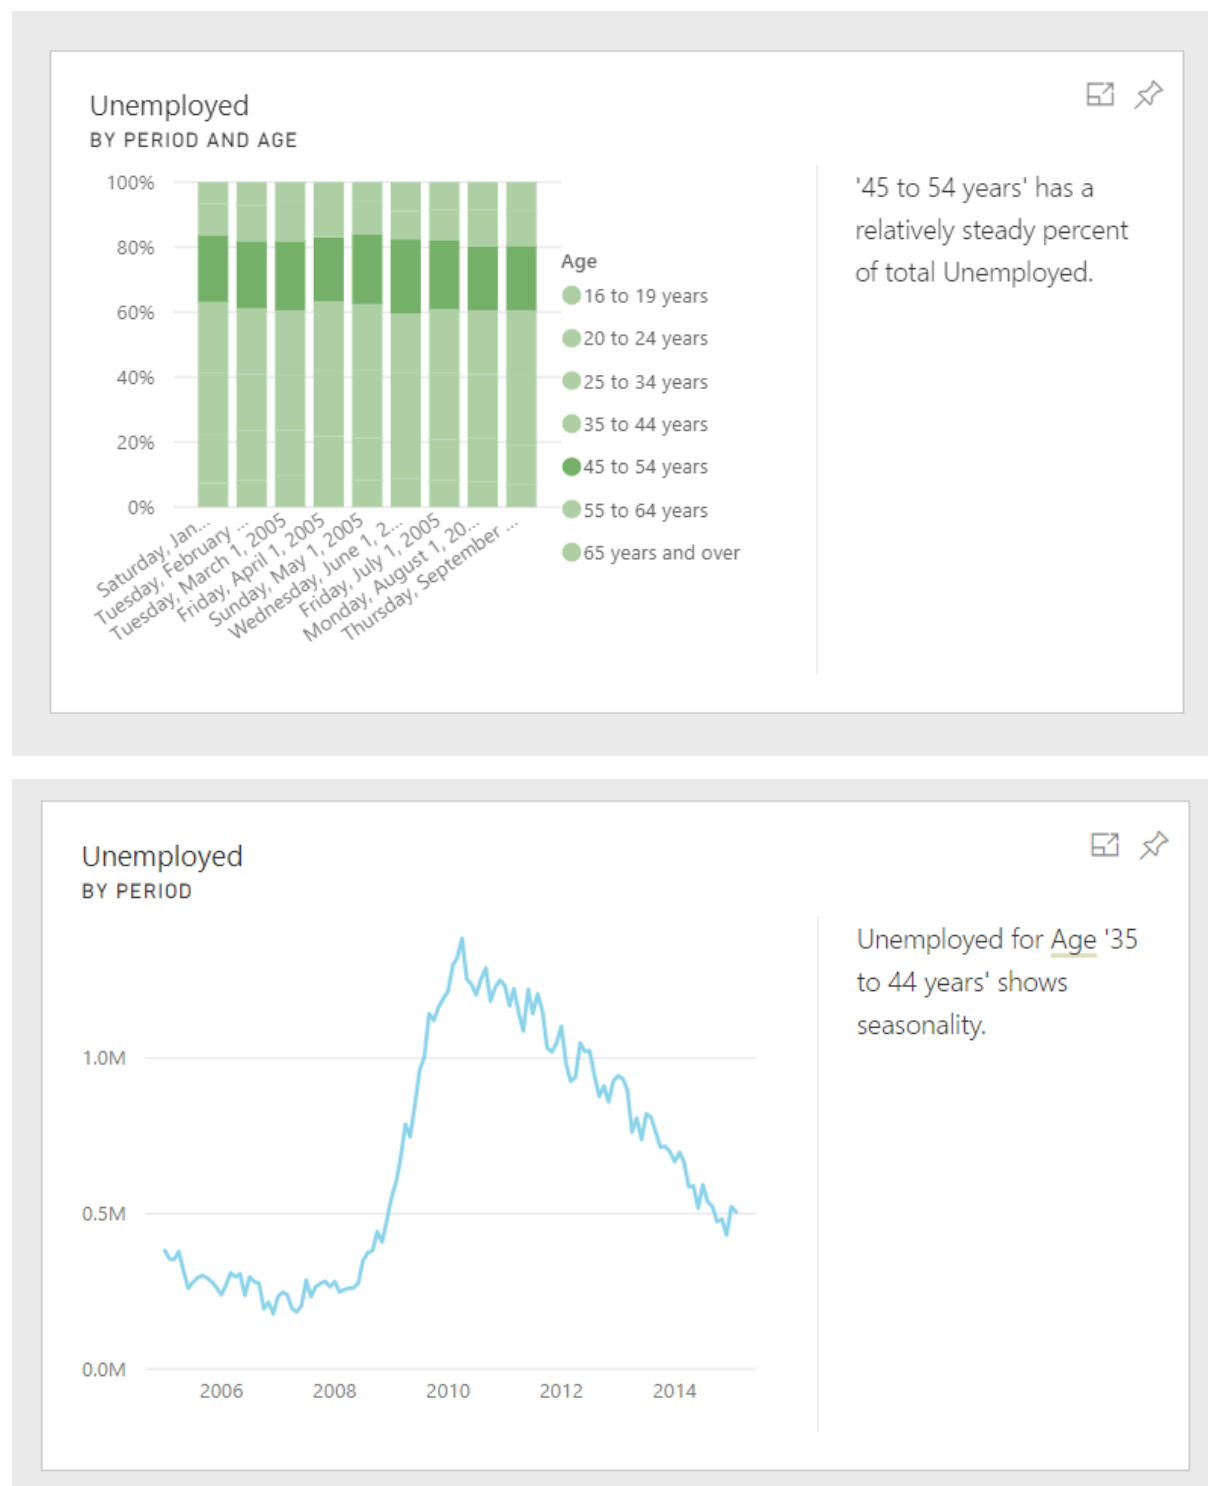

The data has been presented with the help of stacked area chart and slicers. The color combination has been derived from the palettes shared on coolors.co.

Further information can be viewed when the cursor is dragged through out the various point on the chart.

Additional insights have been auto generated by the Power BI quick sight feature.
